

WOODIFY  
original sound solutions

## AN IDEA AND IT'S CRAFT

*"Woodify is the result of a year-long personal research to find a sound quality on my flute, that would suit my taste. Being unsatisfied with the sound of my instrument, I started to experiment to find something that would give me more resistance, more dynamics as well as tone colors.*

*After 2 years of experiments I developed this innovative add-on.*

*Woodify is a handcrafted wooden sound enhancer for woodwind instruments. This patented solution enriches the sound palette of flute, allowing the player great flexibility of expression and a various color palette." - Alessandro Baticci*

## MATERIALS

Woodify sound solutions are made out of selected woods. Each wood type has unique sound characteristics as well as elastic properties and has been chosen for its particular qualities.

After years of experiments with different wood types and combinations, we found the perfect wood type to fit to each flute, according to its response to vibrations and its inner properties. Each wood type matched the material of the instrument.

---

## TECHNOLOGY

Woodify is a patented sound solution. It is the result of years of research with different materials, to achieve the best sounding results, as well as the highest quality and durability of the product.

A special attention has been given to find the best possible integration with the instrument.

Each piece is precisely shaped using cutting-edge technology and superior machining. After an accurate quality test each wooden piece is then carefully hand-crafted and assembled in Vienna.

Woodify are made out of selected seasoned woods, to ensure the greatest sound results and quality of the product.

Great care is being put into the choice of quality materials and the design of each component to make Woodify a unique product.

## WOODIFY FOR FLUTE

Improve the sound of your flute: Get a more dense and full sound and increase projection. Staccato and speed of emission are also improved.

## WOODIFY FOR ALTO AND BASS FLUTE

Woodify improves the responsivity of low instruments, giving them great accuracy in the articulation. It also improves tone density as well as sound volume, making it the ideal add-on for alto and bass flute. Because of the different borings of such instruments, each piece is uniquely hand-crated to perfectly fit on the instrument.

## ALESSANDRO BATICCI

Inventor of Woodify, flautist, composer and entrepreneur, Alessandro is active internationally in the field of classical contemporary music and sound art. Engagements have taken him to Japan, USA, Russia, Argentina, China, Switzerland, Taiwan, and all over Europe, performing in the most important venues and festivals such as Salzburger Festspiele, Lucerne Festival, Warsaw Autumn, Elbphilharmonie, Wiener Musikverein, Wiener Konzerthaus, and others.

His inventive approach brought him to develop electro-acoustical instruments, digital control- and mapping systems for musical instruments as well as sound solutions for winds instruments.

Alessandro lives and works in Vienna, where he designs and creates Woodify.
